### **Restriction Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 29-38, 67-154 and 173-192, drawn to designation of an object and changing the object for transmission, classified in class 379, subclass 88.11.
- II. Claims 39-66 and 162 are, drawn to processing an object for a print operation, classified in class 358, subclass 1.15.

The inventions are distinct, each from the other because: Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as ranking objects that are in a memory. The rank of the objects can be changed and sent over a network such as the Internet. Group II has separate utility in that the queue of the changed job can be modified before the job is sent to a printer. Hence, Group I has utility without printing,

and Group II has utility without changing the rank of an object and sending it over the Internet via an E-mail. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
